

## **West County Road 112 Groundwater Plume, Midland, Midland County, Texas**

EPA Region 6 will be working with the City of Midland to develop a water line design to extend the City water supply system to residences impacted by chromium contaminated groundwater in the area of West County Road 112. The initial planning meeting is scheduled for February 11, 2010, with the City of Midland, the Texas Commission on Environmental Quality (TCEQ), and EPA. To date, the TCEQ has installed and maintained approximately 44 anion-exchange water filtration systems on residential water supply wells where total chromium has been detected above the Federal drinking water limit of 0.1 milligrams per liter. The anion-exchange filtration systems remove the chromium from the well water and provide water that is safe for all household uses. Extension of the City water supply system will replace the current use of filtration systems as a source for a safe drinking water supply.
